FOREWORD

We are pleased to present the **Annual Report on Port State Control in the Asia-Pacific Region 2011**.

The Tokyo MOU maintains a good trend of development and achievement of PSC activities. In 2011, member Authorities of the Tokyo MOU carried out a total of 28,627 inspections, which is an increase of 11% over the previous year. In addition, the regional inspection rate has been also increased from 66% to 68%. In collaboration with the Paris MOU, the Tokyo MOU successfully conducted the concentrated inspection campaign (CIC) on structural safety and the Load Lines. The Tokyo MOU continues its efforts to improve the internal system and to enhance the external relationship.

This annual report summarizes the port State control developments and activities of the Tokyo MOU in 2011. Furthermore, the report also includes port State control statistics and analysis which provides the results of inspections carried out by member Authorities during the year.

As observed in the previous Annual Report, the overall detention rate has declined gradually during the past three years. However, more attention needs to be paid to the areas of maintenance of ship and equipment, and development of plans for shipboard operations related to the ISM Code, which have been found as the two most frequent reasons for detentions. With that in mind, the Tokyo MOU will continue to strengthen and to improve measures for eradication of substandard ships so as to promote the safety, security, and protection of the marine environment, and to improve living and working conditions onboard.

Hua Siong Ong

OVERVIEW

GENERAL INTRODUCTION

The Annual Report on Port State Control in the Asia-Pacific Region is published under the auspices of the Port State Control Committee of the Memorandum of Understanding on Port State Control in the Asia-Pacific Region (Tokyo MOU). This annual report is the seventeenth issue and covers port State control activities and developments in the year 2011.

The Memorandum was concluded in Tokyo on 1 December 1993. The following maritime Authorities in the Asia-Pacific region are the signatories to the Memorandum: Australia, Canada, Chile, China, Fiji, Hong Kong (China), Indonesia, Japan, Republic of Korea, Malaysia, New Zealand, Papua New Guinea, the Philippines, the Russian Federation, Singapore, Solomon Islands, Thailand, Vanuatu and Viet Nam. The Memorandum came into effect on 1 April 1994.

In accordance with the provisions of the Memorandum, the Authorities which have signed and formally accepted the Memorandum or which have been accepted with unanimous consent of the Port State Control Committee would become full members. Currently, the Memorandum has 18 full members, namely: Australia, Canada, Chile, China, Fiji, Hong Kong (China), Indonesia, Japan, Republic of Korea, Malaysia, New Zealand, Papua New Guinea, the Philippines, the Russian Federation,

Singapore, Thailand, Vanuatu and Viet Nam. A maritime Authority which declared the clear intention to fully adhere to the Memorandum within a three-year period would be accepted as a co-operating member with unanimous consent of the Port State Control Committee. The Republic of the Marshall Islands is the only co-operating member Authority at the moment.

The main objective of the Memorandum is to establish an effective port State control regime in the Asia-Pacific region through co-operation of its members and harmonization of their activities, to eliminate substandard shipping so as to promote maritime safety, to protect the marine environment and to safeguard working and living conditions on board ships.

The Port State Control Committee established under the Memorandum monitors and controls the implementation and on-going operation of the Memorandum. The Committee consists of representatives of the member Authorities, co-operating member Authorities and observers. The observer status has been granted the following maritime Authorities and the inter-governmental organizations by the Committee: Democratic People's Republic of Korea, Macao (China), Solomon Islands, United States Coast Guard, the International Maritime Organization (IMO), the International Labour Organization (ILO), the Paris MOU, the Viña del Mar Agreement, the Indian Ocean MOU and the Black Sea MOU. The

Secretariat of the Memorandum is located in Tokyo, Japan.

For the purpose of the Memorandum, the following instruments are the basis for port State control activities in the region:

- the International Convention on Load Lines, 1966;
- the Protocol of 1988 relating to the International Convention on Load Lines, 1966, as amended;
- the International Convention for the Safety of Life at Sea, 1974, as amended;
- the Protocol of 1978 relating to the International Convention for the Safety of Life at Sea, 1974;
- the Protocol of 1988 relating to the International Convention for the Safety of Life at Sea, 1974;
- the International Convention for the Prevention of Pollution from Ships 1973, as modified by the Protocol of 1978 relating thereto, as amended;
- the International Convention on Standards for Training, Certification and Watchkeeping for Seafarers, 1978, as amended;
- the Convention on the International Regulations for Preventing Collisions at Sea, 1972;
- the International Convention on Tonnage Measurement of Ships, 1969;
- the Merchant Shipping (Minimum Standards) Convention, 1976 (ILO Convention No. 147); and
- the International Convention on the Control of Harmful Anti-fouling Systems on Ships, 2001.

REVIEW OF YEAR 2011

For the purpose of promotion of better communication and relationship with the industry, the Tokyo MOU took an initiative to consider establishment of an appropriate scheme for exchange of views and carrying out dialogues with the industry. The scheme under consideration would improve the common understanding and mutual co-operation between the Tokyo MOU Authorities and the industry.

The concentrated inspection campaign (CIC) on Structural Safety and the Load Lines Convention was conducted from 1 September to 30 November 2011. During the campaign period, a total of 7,534 PSC inspections were conducted by the eighteen member Authorities, of which 5,901 were related to a CIC inspection. A total of 2,929 CIC related deficiencies were recorded. The most significant deficiencies found during the campaign were related to the protection of openings (Ventilators, air pipes, casings) 554 (18.91%), followed with casing (Hatchway-, tarpaulins, etc.) 273 (9.29%) and Doors 245 (8.36%). There were a total of 346 detentions during the three-month campaign period, among which 83 ships were detained as the direct results of the CIC. The detention rate for the CIC is 1.41% while the overall detention rate for the period is 4.59%. A major concern which had been raised from the CIC was that

a large number of deficiencies relating to cargo hatch openings were found onboard ships during the period. This campaign was carried out jointly with the Paris MOU and also with participation by regional PSC regimes of the Viña del Mar Agreement, the Indian Ocean MOU, the Mediterranean MOU and the Black Sea MOU.

The trial implementation of measures against the under-performing ships have been continued for more than one year. The measures taken on under-performing ships proves effective as it has been found that more and more people check the list of under-performing ships published by the Tokyo MOU regularly and that a number of positive feedbacks from the relevant flag State administrations and the ISM companies of the ships have been received.

THE PORT STATE CONTROL COMMITTEE

The twenty-first meeting of the Port State Control Committee was held in Busan,

Republic of Korea, from 18 to 21 April 2011. The meeting was hosted by the Ministry of Land, Transport and Maritime Affairs of the Republic of Korea. The meeting was chaired by Mr. Ong Hua Siong, Assistant Director (Ship Regulation and Development/Port State Control), Shipping Division, Maritime and Port Authority of Singapore.

The twenty-first Committee meeting was attended by representatives of the member Authorities of Australia, Canada, Chile, China, Hong Kong (China), Indonesia, Japan, Republic of Korea, Malaysia, New Zealand, Papua New Guinea, the Philippines, the Russian Federation, Singapore, Thailand and Viet Nam, and observers from Macao (China), the United States Coast Guard, the Black Sea MOU, the Indian Ocean MOU, the Paris MOU, the Viña del Mar Agreement and the International Maritime Organization.

The Committee reviewed the results of trial implementation of measures against the under-performing ships. In order to gain more

The twenty-first Committee meeting, Busan, April 2011.

experiences and to promote more effective implementation of the measures, the Committee agreed to continue the trial for a further inter-sessional period and to make the final decision thereon at the next meeting.

The Committee considered a detailed analysis report of the CIC on lifeboat launching arrangements conducted in 2009. The Committee discussed the findings and recommendations. The Committee agreed to consider follow-up measures stemming from the CIC at the next meeting. The Committee approved the arrangements for the CIC on Structural Safety and the Load Lines which was planned to be conducted during period September – November 2011 simultaneously with the Paris MOU. The Committee reconfirmed its decision for the joint CIC on Fire Safety System (FSS) with the Paris MOU in 2012. Furthermore, the Committee also considered the possible topics which could be selected for CICs in 2013 and onward.

The Committee reviewed achievements and status of the action plan developed based on the strategic plan. The Committee updated the action plan by changing or adding further actions to the relevant items. The Committee considered the text of agreement with IMO on data exchange with GISIS. The Committee approved the agreement and authorized the Secretary to sign the agreement with IMO during the fifth IMO workshop for PSC MoU/Agreement Secretaries and Database Managers.

During the meeting, the Committee also gave consideration and made decisions on the following:

- assessment of performance of member Authorities;

- review of list of follow-up actions emanating from the second Joint Ministerial Conference;
- consideration of elements of Paris MOU new inspection regime (NIR);
- schedule for implementation of the new coding system;
- review and adjustment of the capped amount of financial contribution;
- establishment of scheme for dialogue and exchange of views with the industry; and
- awarding the winner of the best deficiency photo of the year.

The twenty-second meeting of the Port State Control Committee will be held in Chile in April 2012.

TECHICAL WORKING GROUP (TWG)

The fourth meeting of the Technical Working Group (TWG) was held in Busan, Republic of Korea, from 15 to 16 April 2011, prior to the twenty-first meeting of the Committee. The TWG04 meeting was chaired by Mr. Christopher Lindesay, Principal Systems Officer, Australian Maritime Safety Authority.

The TWG meeting discussed and made recommendations to the Committee on matters relating to:

- cases considered by the detention review panel;
- periodical revision of the PSC Manual;

- development and review of PSC guidelines;
- preparation and arrangements for on-going and upcoming CICs;
- reports of intersessional groups: advisory group on information exchange (AG-IE), intersessional group on batch protocol (IG-BP) and intersessional group on statistics (IG-Statistics);
- activities and operation of the APCIS system;
- management and maintenance of the coding system;
- analysis and statistics on PSC;
- information exchange with other regional PSC databases; and
- reports and evaluations of technical co-operation activities.

ASIA-PACIFIC COMPUTERIZED INFORMATION SYSTEM (APCIS)

For reporting and storing of port State inspection results and facilitating exchange of information in the region, a computerized database system, the Asia-Pacific Computerized Information System (APCIS), was established. The central site of the APCIS is located in Moscow, under the auspices of the Ministry of Transport of the Russian Federation.

The APCIS system is connected by member Authorities on-line or by batch protocol for

searching ships for inspection and for inputting and transmitting inspection reports. The APCIS also supports on-line publication of PSC data on the Tokyo MOU web-site (<http://www.tokyo-mou.org>) on a real time basis. Based on data stored in the database, the APCIS produces annual and detailed PSC statistics.

For inter-regional information exchange, the APCIS has established deep hyperlinks with the databases of:

- THETIS of the Paris MOU;
- BSIS of the Black Sea MOU;
- IOCIS of the Indian Ocean MOU; and
- CIALA of the Viña del Mar Agreement.

TRAINING AND SEMINARS FOR PORT STATE CONTROL OFFICERS

As mentioned in the previous Annual Report, the technical co-operation activities have been implemented in accordance with the revised integrated strategic plan for technical co-operation programmes from 2011 to 2015. Now, the technical co-operation programmes consist of general training course for PSC officers, specialized training course, expert mission training, PSCO exchange and PSC seminars.

The first general training course for PSC officers was held in Yokohama, Japan, from 30 August to 27 September 2011. This was the seventh training course jointly organized by IMO and the Tokyo MOU. A total of 20 PSC officers participated in the training course. Twelve of them were from the Tokyo MOU Authorities of Chile, China, Fiji, Indonesia, Republic of Korea, Macao (China), Malaysia, the Marshall Islands, New Zealand, the Philippines, Thailand and Viet Nam. The other

Training course for PSC officers

eight were invited by IMO, one each from Abuja MOU, the Viña del Mar Agreement, Black Sea MOU, Caribbean MOU, Mediterranean MOU, Riyadh MOU and two from the Indian Ocean MOU. The course was conducted with the assistance by the Shipbuilding Research Center of Japan (SRC).

The four-week general training course is composed of two-week classroom lectures, which provide trainees with a wide range of lectures and presentations relating to port State control provisions, convention requirements and regulations; PSC inspection and reporting procedures, and onboard training for practical PSC inspection experience during the latter two weeks. Experts from the Ministry of Land, Infrastructure, Transport and

Tourism of Japan (MLIT), SRC and the Secretariat delivered lectures on the relevant subjects. For the onboard training, participants were divided into five groups to receive the practical training at ports of Yokohama, Osaka, Kobe, Hiroshima and Hakata respectively. In addition, a technical visit to a liferaft manufacturer was also arranged.

The nineteenth seminar for PSC officers was held Singapore from 25 to 28 July 2011. The seminar was hosted by the Maritime and Port Authority of Singapore (MPA). Participants from Authorities of Canada, Chile, China, Fiji, Hong Kong (China), Indonesia, Japan, Democratic People's Republic of Korea, the Republic of Korea, Macao (China), Malaysia, Papua New Guinea, the Philippines,

Onboard training

Onboard training

the Russian Federation, Singapore, Thailand, Vanuatu and Viet Nam attended the seminar.

Experts from MPA of Singapore and MLIT of Japan delivered the comprehensive and informative presentations on the outcome of relevant IMO meetings regarding PSC, the CIC on Structural Safety and the Load Lines, bulk carrier safety, assessment and evaluation of lifeboat release hooks, oily water separator and explanations on issues concerning ECDIS. Participants also received information about the recent development and activities of the Tokyo MOU, problems/issues on PSC inspection reporting, new coding system and PSC activities in Singapore. There were two case study sessions conducted during the seminar as well as discussion of the

actual cases provided by Authorities or reviewed by the detention review panel.

The first specialized training course was organized in Vancouver, British Columbia, Canada, from 14 to 17 November 2011, by the kind invitation of Transport Canada, Marine Safety. The theme of this specialized training course was the Maritime Labour Convention (MLC) 2006. Participants from Canada, Chile, China, Fiji, Hong Kong (China), Indonesia, Japan, Macao (China),

Malaysia, the Marshall Islands, the Philippines, Singapore, Thailand, the United States Coast Guard, Viet Nam and the Viña del Mar Agreement attended the training course. Two speakers were invited from the Liberian Maritime Administration, who presented the MLC2006 and the various titles giving in depth

The nineteenth seminar for PSC officers

Specialized training course

knowledge of the convention and the procedures to obtain the certification for the ship. Explanation of the guidelines for Flag States and Port State inspectors was also given during the course. In addition to the main subject, various presentations were made by representatives from Transport Canada, ITF local office, Seafarers' Mission and the Secretariat.

There were two expert missions organized in 2011. One mission was held in Kota Konabalu, Malaysia, from 6 to 17 June 2011. Experts from the Republic of Korea conducted the training. The other one was in Manila, the Philippines, from 17 to 28 October 2011, which was carried out by two experts dispatched from Japan.

In 2011, eight PSC officer exchanges were completed, namely one PSC officer from Japan to Singapore, one from Australia to Japan, one from Canada to China, one from Australia to Singapore, one from Russian Federation to Australia, one from Singapore to

Canada, one from Hong Kong (China) to Republic of Korea and one from Japan to Hong Kong (China). Currently, the PSC officers exchange programme is implemented among the Authorities of Australia, Canada, China, Hong Kong (China), Japan, Republic of Korea, New Zealand, Russian Federation and Singapore.

The successful and effective implementation of technical co-operation programmes gives the Tokyo MOU the potential for the sustainable development and achievement. The above mentioned technical co-operation activities have received full support from all Authorities and the continuous financial assistance from the Nippon Foundation.

CO-OPERATION WITH OTHER REGIONAL PORT STATE CONTROL AGREEMENTS

Establishment and effective operation of regional co-operation regimes on port State control has formed a worldwide network for elimination of substandard shipping. Currently, there are a total of nine regional port State control agreements (MOUs) covering the major part of the world, namely:

- Abuja MOU
- Black Sea MOU
- Caribbean MOU
- Indian Ocean MOU
- Mediterranean MOU
- Paris MOU
- Riyadh MOU

- Tokyo MOU
- Viña del Mar Agreement

As one of the inter-governmental organizations (IGO) associated with IMO, the Tokyo MOU has attended the meetings of the Flag State Implementation (FSI) Sub-Committee since 2006. The Tokyo MOU Secretariat presented at the nineteenth session of FSI in February 2011.

The Fifth IMO Workshop for PSC MoU/Agreement Secretaries and Database Managers was held from 14 to 16 June 2011 at IMO Headquarters. The major agenda discussed at the workshop were update on activities and decisions by regional PSC agreements, information network, draft Assembly Resolution on Procedures on PSC and other PSC-related matters and technical co-operation activities. During the workshop,

Tokyo MOU, as well as Riyadh MOU and the Viña del Mar Agreement, signed the agreement with IMO on data exchange with GISIS.

In support of inter-regional collaboration on port State control, the Tokyo MOU holds an observer status of the Paris MOU, the Caribbean MOU and the Indian Ocean MOU. In a similar manner, the Tokyo MOU has granted an observer status to the Paris MOU, the Indian Ocean MOU, the Viña del Mar Agreement and the Black Sea MOU.

The Tokyo MOU has established, and maintains, effective and close co-operation with the Paris MOU both at administrative and the technical levels. Representatives of the two Secretariats attend the Port State Control Committee meetings of each MOU on a regular basis. During the period of 2011,

PSC training course for Indian Ocean MOU

continuous efforts and further coordinated actions by the two Memoranda were made on the following:

- carrying out the joint CIC on Structural Safety and the Load Lines;
- preparation of joint CICs on Fire Safety System (FSS) 2012 and on Propulsion and Auxiliary Machinery 2013;
- continuous submission to IMO on annual list of flags targeted by the Paris MOU, Tokyo MOU and the United States Coast Guard;
- analysis of performance of flag and RO and submission of the outcome to IMO jointly; and
- liaison on management and maintenance of the coding system.

Under the project of technical co-operation with other regions, a third PSC training course was held in Mombasa, Kenya, from 31 January to 11 February 2011. The training was organized by the Tokyo and the Indian Ocean Memoranda, and IMO jointly. Experts from the Tokyo MOU Authorities of Australia, Japan and Republic of Korea and an officer from the Tokyo MOU Secretariat conducted the training. A total of 16 participants from the Indian Ocean MOU Authorities as well as other regional PSC agreements attended the training course. The training course in Kenya was carried out with the financial support by the Nippon Foundation and IMO.

PORT STATE CONTROL UNDER THE TOKYO MOU, 2011

INSPECTIONS

In 2011, 28,627 inspections, involving 15,771 individual ships, were carried out on ships registered under 103 flags. Figure 2 and Table 2 show the number of inspections carried out by the member Authorities of the Tokyo MOU. Out of 28,627 inspections, there were 18,650 inspections where ships were found with deficiencies. Since the total number of individual ships operating in the region was estimated at 23,268*, the inspection rate in the region was approximately 68%** in 2011 (see Figure 1). It is notable that the trend of increase

of number of inspections and inspection rate has been maintained.

Information on inspections according to ships' flag is shown in Table 3.

Figures summarizing inspections according to ship type are set out in Figure 3 and Table 4.

Inspection results regarding recognized

* Number of individual ships which visited the ports of the region during the year (the figure was provided by LLJ).

** The inspection rate is calculated by: number of individual ships inspected/number of individual ships visited.

organizations are shown in Table 5.

DETENTIONS

Ships are detained when the condition of the ship or its crew does not correspond substantially with the applicable conventions. Such strong action is to ensure that the ship will not sail until it can proceed to sea without presenting a danger to the ship or persons on board, or without presenting an unreasonable threat of harm to the marine environment.

In 2011, 1,562 ships registered under 61 flags were detained because of serious deficiencies

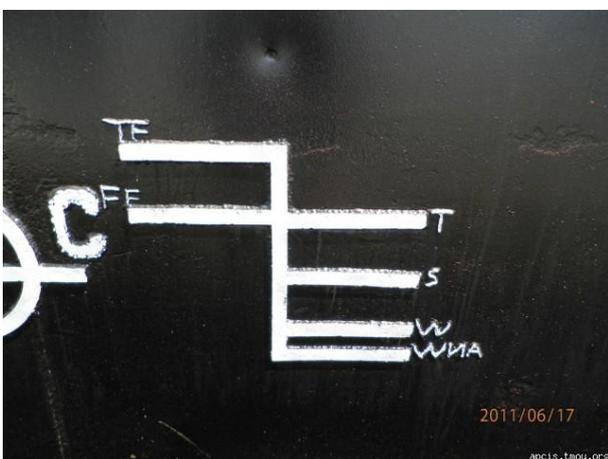

found onboard. The detention rate of ships inspected was 5.46%. Comparing with the last year, detentions increased 151 by number or 11% by percentage.

Figure 4 shows the detention rate by flag that had at least 20 port State inspections and whose detention rate was above the average regional rate. Figure 5 gives the detention rate by ship type. A newly introduced Figure 7 shows the most frequent detainable deficiencies found during inspections.

Black-grey-white list (Table 7) indicates levels of performance of flags during three-year rolling period. The black-grey-white list for 2009-2011 consists of 62 flags, whose ships were involved in 30 or more inspections during the period. It is encouraging that both the black list and the grey list became smaller

and the white list has expanded. There are 13 flags on the black list. Belize, Turkey and Tuvalu moved from the black list into the grey list but Tonga rejoined in the black list. The grey list consists of 16 flags and the white list includes 33 flags which is the highest number since publication of the black-grey-white list.

DEFICIENCIES

All conditions on board found not in compliance with the requirements of the relevant instruments by the port State control officers were recorded as deficiencies and requested to be rectified.

A total of 103,549 deficiencies were recorded in 2011. The deficiencies found are categorized and shown in Figure 6 and Table 6.

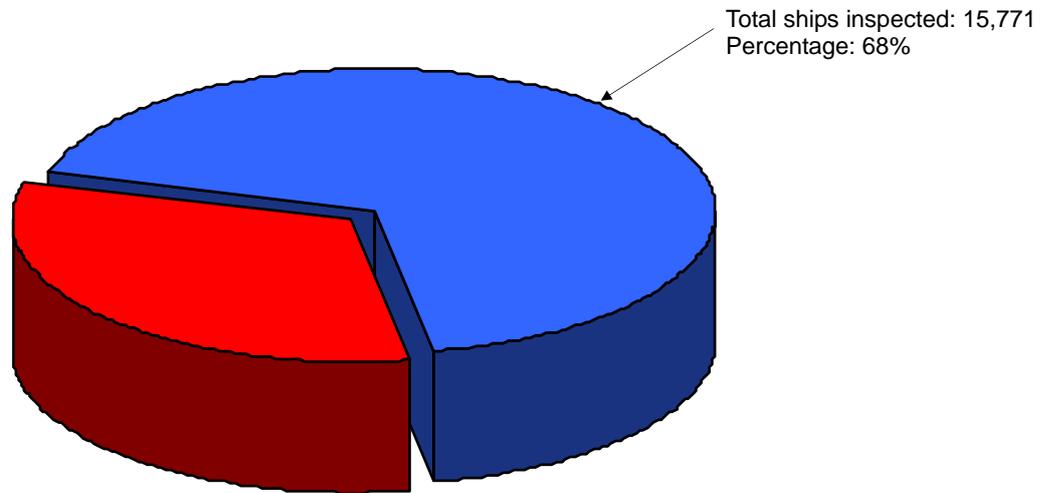

It has been noted that fire safety measures, life-saving appliances and safety of navigation remain as the three major categories of deficiencies which are frequently discovered on ships. In 2011, 18,114 fire safety measures related deficiencies, 17,435 safety of navigation related deficiencies and 12,281 life-saving appliances related deficiencies were recorded, representing nearly 50% of the total number of deficiencies.

The number of deficiencies relating to stability, structure and related equipment and the Load Lines increased about 19% and 32% respectively. This can be seen as the direct results of the CIC of the year in one hand and also proved the appropriateness for taking this subject for the campaign on the other hand. It is further noted that the overall MARPOL related deficiencies rose over 20%.

**OVERVIEW OF PORT STATE CONTROL
RESULTS 2001 – 2011**

Figures 8-13 show the comparison of port State inspection results for 2001 - 2011. These figures indicate the trends in port State activities and ship performance over the past eleven years.

Note: The number of overall inspections and overall detentions is calculated corresponding to each recognized organization (RO) that issued statutory certificate(s) for a ship. In case that ship's certificates were issued by more than one ROs, the inspection and detention would be counted to each of them.

Table 6: DEFICIENCIES BY CATEGORIES

Nature of deficiencies	No. of deficiencies
Ship's certificates and documents	2,810
Stability, structure and related equipment	8,257
Propulsion and auxiliary machinery	7,166
Alarm signals	704
Fire safety measures	18,114
Oil, chemical tankers and gas carriers	284
Lifesaving appliances	12,281
Radiocommunications	3,073
Safety of navigation	17,435
Carriage of cargo and dangerous goods	661
ISM related deficiencies	3,497
SOLAS related operational deficiencies	4,930
Additional measures to enhance maritime safety	743
Bulk carriers-additional safety measures	641
Load lines	8,139

ANNEX 3

ORGANIZATIONAL STRUCTURE OF THE TOKYO MOU

EXPLANATORY NOTE ON THE BLACK – GREY – WHITE LISTS

The Port State Control Committee adopted the same method as used by the Paris MOU for assessment of performance of flags. Compared to the calculation method of previous year, this system has the advantage of providing an excess percentage that is significant and also reviewing the number of inspections and detentions over a 3-year period at the same time, based on binomial calculus.

The performance of each flag State is calculated using a standard formula for statistical calculations in which certain values have been fixed in accordance with the agreement of the Port State Control Committee. Two limits have been included in the new system, the 'black to grey' and the 'grey to white' limit, each with its own specific formula:

$$U_{black - to - grey} = N \cdot p + 0.5 + z \cdot \sqrt{N \cdot p \cdot (1 - p)}$$

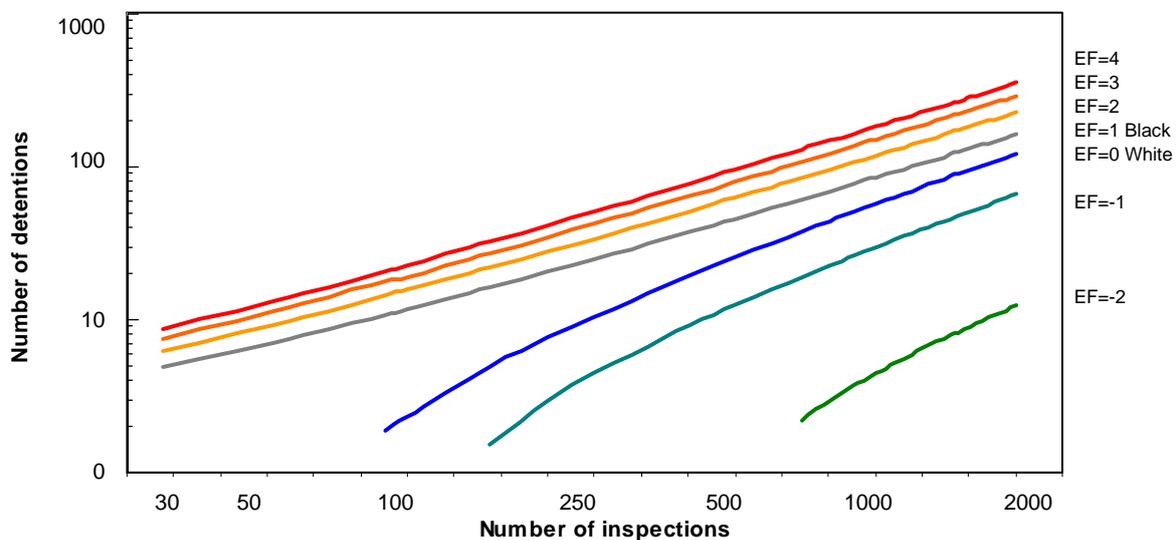

$$U_{white - to - grey} = N \cdot p - 0.5 - z \cdot \sqrt{N \cdot p \cdot (1 - p)}$$

In the formula "N" is the number of inspections, "p" is the allowable detention limit (yardstick), set to 7% by the Tokyo MOU Port State Control Committee, and "z" is the significance requested (z=1.645 for a statistically acceptable certainty level of 95%). The result "u" is the allowed number of detentions for either the black or white list. The "u" results can be found in the table as the 'black to grey' or the 'grey to white' limit. A number of detentions above this 'black to grey' limit means significantly worse than average, where a number of detentions below the

'grey to white' limit means significantly better than average. When the amount of detentions for a particular flag State is positioned between the two, the flag State will find itself on the grey list. The formula is applicable for sample sizes of 30 or more inspections over a 3-year period.

To sort results on the black or white list, simply alter the target and repeat the calculation. Flags which are still significantly above this second target are worse than the flags which are not. This process can be repeated, to create as many refinements as desired. (Of course the maximum detention rate remains 100%!) To make the flags' performance comparable, the excess factor (EF) is introduced. Each incremental or decremental step corresponds with one whole EF-point of difference. Thus the excess factor EF is an indication for the number of times the yardstick has to be altered and recalculated. Once the excess factor is determined for all flags, the flags can be ordered by EF. The excess factor can be found in the last column the black, grey or white list. The target (yardstick) has been set on 7% and the size of the increment and decrement on 3%. The Black – Grey – White lists have been calculated in accordance with the above principles.

The graphical representation of the system, below, is showing the direct relations between the number of inspected ships and the number of detentions. Both axis have a logarithmic character.

Example flag on Black list:

Ships of Sierra Leone were subject to 555 inspections of which 111 resulted in a detention. The "black to grey limit" is 49 detentions. The excess factor is 4.42.

N = total inspections

P = 7%

Q = 3%

Z = 1.645

How to determine the black to grey limit:

$$u_{black-to-grey} = N \cdot p + 0.5 + z \cdot \sqrt{N \cdot p \cdot (1 - p)}$$

$$u_{black-to-grey} = 555 \cdot 0.07 + 0.5 + 1.645 \cdot \sqrt{555 \cdot 0.07 \cdot 0.93}$$

$$u = 49$$

The excess factor is 4.42. This means that 'p' has to be adjusted in the formula. The black to grey limit has an excess factor of 1, so to determine the new value for 'p', 'q' has to be multiplied with 3.42, and the outcome has to be added to the normal value for 'p':

$$p + 3.42q = 0.07 + (3.42 \cdot 0.03) = 0.1726$$

$$u_{excessfactor} = 555 \cdot 0.1726 + 0.5 + 1.645 \cdot \sqrt{555 \cdot 0.1726 \cdot 0.8274}$$

$$u_{excessfactor} = 111$$

Example flag on Grey list:

Ships of Turkey were subject to 179 inspections, of which 18 resulted in a detention. The "black to grey limit" is 19 and the "grey to white limit" is 6. The excess factor is 0.95.

How to determine the black to grey limit:

$$u_{black-to-grey} = 179 \cdot 0.07 + 0.5 + 1.645 \cdot \sqrt{179 \cdot 0.07 \cdot 0.93}$$

$$u_{black-to-grey} = 19$$

How to determine the grey to white limit:

$$u_{white-to-grey} = N \cdot p - 0.5 - z \cdot \sqrt{N \cdot p \cdot (1 - p)}$$

$$u_{white-to-grey} = 179 \cdot 0.07 - 0.5 - 1.645 \cdot \sqrt{179 \cdot 0.07 \cdot 0.93}$$

$$u_{white-to-grey} = 6$$

To determine the excess factor the following formula is used:

$$ef = (\text{Detentions} - \text{white to grey limit}) / (\text{grey to black limit} - \text{white to grey limit})$$

$$ef = (18 - 6.41) / (18.65 - 6.41)$$

$$ef = 0.95$$

Example flag on White list:

Ships of the Marshall Islands were subject to 2,753 inspections of which 103 resulted in detention. The "grey to white limit" is 170 detentions. The excess factor is -0.87.

How to determine the grey to white limit:

$$u_{\text{white-to-grey}} = N \cdot p - 0.5 - z \cdot \sqrt{N \cdot p \cdot (1 - p)}$$

$$u_{\text{white-to-grey}} = 2,753 \cdot 0.07 - 0.5 - 1.645 \cdot \sqrt{2,753 \cdot 0.07 \cdot 0.93}$$

$$u_{\text{white-to-grey}} = 170$$

The excess factor is -0.87. This means that 'p' has to be adjusted in the formula. The grey to white limit has an excess factor of 0, so to determine the new value for 'p', 'q' has to be multiplied with -0.87, and the outcome has to be added to the normal value for 'p':

$$p + (-0.87) = 0.07 + (-0.87 \cdot 0.03) = 0.0439$$

$$u_{\text{excessfactor}} = 2,753 \cdot 0.0439 - 0.5 - 1.645 \cdot \sqrt{2,753 \cdot 0.0439 \cdot 0.9561}$$

$$u_{\text{excessfactor}} = 103$$

According to the decision by the Port State Control Committee, flags involving 30-49 port State inspections with nil detentions are listed on top of the White List.

TOKYO MOU SECRETARIAT

The Secretariat (Tokyo MOU Secretariat) of the Memorandum of Understanding on Port State Control in the Asia-Pacific Region is located in Tokyo, Japan. The Secretariat may be approached for further information or inquiries on the operation of the Memorandum.

ADDRESS OF THE SECRETARIAT

The address of the Tokyo MOU Secretariat reads:

Tokyo MOU Secretariat
Ascend Shimbashi 8F
6-19-19 Shimbashi
Minato-ku, Tokyo
Japan 105-0004
Tel: +81-3-3433-0621
Fax: +81-3-3433-0624
E-mail: secretariat@tokyo-mou.org

STAFF OF THE SECRETARIAT

The staff of the Secretariat consist of:

Mitsutoyo Okada
Secretary

Ikuo Nakazaki
Deputy Secretary

Ning Zheng
Technical Officer

Fumiko Akimoto
Projects Officer
